Senior Software Engineer | Scalable Systems & Data Processing (Python & Go)

Summary

Senior Software Engineer with a strong focus on building scalable, reliable systems and data-driven applications. Experienced in designing backend architectures, optimizing data flows, and delivering production-grade services with high performance and stability.

Proficient in Python, Go, Ruby on Rails, and Node.js, with hands-on experience developing RESTful and GraphQL APIs. Solid background in working with relational and NoSQL databases, as well as implementing performance optimizations such as caching, asynchronous processing, and efficient data handling.

Skilled in designing and maintaining distributed systems, ensuring data consistency, and improving system reliability in real-world environments. Comfortable operating across the full stack when needed, while maintaining a primary focus on backend and data engineering.

On the frontend, experienced with modern frameworks including React.js, Vue.js, and Next.js, with practical knowledge of state management and scalable UI development.

Strong foundation in both object-oriented and functional programming paradigms, with additional experience in C/C++ and exposure to machine learning and NLP concepts, supporting a broader problem-solving approach.

Focused on delivering clean, maintainable code, collaborating effectively within cross-functional teams, and continuously improving systems with a pragmatic, delivery-oriented mindset.

Experience

Senior Full Stack Engineer

TrueCar, Inc. (Jul 2024 - Oct 2025)

Location: Santa Monica, CA, USA

- Designed and maintained backend services and APIs with a focus on system reliability and consistent data flow
- Built and optimized RESTful APIs, improving data synchronization between services and frontend applications
- Improved backend performance through Redis caching and efficient data handling strategies
- Supported production deployments and system stability using AWS and CI/CD workflows

- Collaborated across teams to deliver scalable features with a backend-driven architecture

Senior Full Stack Engineer

FutureLearn Limited (Sep 2022 - Jun 2024)

Location: London, UK

- Developed and maintained backend systems and APIs using Ruby on Rails, Python and Node.js
- Designed RESTful and GraphQL APIs to support data integration across platform services
- Improved performance of high-traffic endpoints through backend optimization and efficient data processing
- Worked with frontend systems (React, TypeScript) while maintaining a primary focus on backend logic
- Supported cloud infrastructure and deployment pipelines using AWS, Heroku, and CI/CD tools

Full Stack Engineer

Levi9 Global Sourcing B.V. (Oct 2019 - Aug 2022)

Location: Belgrade, Serbia

- Built full-stack applications with a focus on backend APIs and data processing workflows
- Developed backend services using PHP, improving data handling efficiency and system performance
- Integrated frontend components with backend services, ensuring reliable data exchange
- Contributed to system improvements, debugging, and deployment processes
- Integrated third-party services to enhance system functionality and data flow

Intern Web Developer

Zühlke Engineering AG (Dec 2018 - Sep 2019)

Location: Belgrade, Serbia

- Assisted in development and maintenance of web applications using HTML, CSS, JavaScript, and PHP
- Supported feature implementation, debugging, and basic backend logic
- Gained practical experience with version control, testing, and development workflows
- Collaborated with senior developers to improve internal tools and usability

Education

Bachelor of Computer Science

Faculty of Organizational Sciences, University of Belgrade (October 2014 - November 2018)

Location: Belgrade, Serbia

- Final project: Web Application Development

- Graduated with distinction

Language

- Serbian (Native)
- English (Fluent)
- Chinese (Proficient)

Certifications

- Back-End Development and APIs - freeCodeCamp
- Front-End Development and APIs - freeCodeCamp
- Ruby on Rails Developer Certificate - The Odin Project.

Skills

- Backend Engineering

- Design and development of scalable backend systems and APIs
- RESTful and GraphQL API architecture
- Microservices and service-oriented design
- Backend application development (Python, Go, Ruby on Rails, Node.js)

- Data & System Processing

- Data processing pipelines and application-level data workflows
- Structured and unstructured data handling
- Database design and optimization (PostgreSQL, MongoDB, MySQL)
- Data integration across services and external APIs

- Performance & Scalability

- Backend performance optimization and query tuning
- Caching strategies (Redis)
- Asynchronous processing and message queues (RabbitMQ)
- High-traffic system handling and reliability improvements

- Cloud & Infrastructure

- Cloud-based deployment and system management (AWS, Heroku)
- Containerization and environment management (Docker)
- CI/CD pipelines and automated deployment workflows
- System monitoring and production stability

- Full-Stack Development (Supporting)

- Frontend development with React, Vue.js, Next.js
- Integration of frontend applications with backend systems
- End-to-end feature development across the stack
